

## **170.315(d)(13) Multi-factor authentication – 2015 Edition Cures Update**

TheraDoc supports multi-factor authentication for clinical and administrative user access to any module in the system.

- For on-premise implementations, users must first sign on to their network and then sign on to TheraDoc.
- For cloud implementations, users must first sign on to the Premier cloud system, which applies two-step authentication before the user can access TheraDoc.
